Aquatic Hyphomycetes and Rust Fungi of  
Grand Teton National Park  
John W. Baxter  
Botany Department  
University of Wisconsin--Milwaukee  
Project Number 101

During August, 1969, Lunulospora curvula and Culicidospora aquatica were added to the list of aquatic hyphomycetes known to occur in Grand Teton National Park. This brings to 18 the number of known species of this group recorded in the Park during this survey. In addition, three new species have been collected. The results of this survey will be summarized in a short paper to be published in Mycologia.

During August, 1969, 134 specimens of rust fungi were collected in the Park. Additional material of Puccinia helianthellae was obtained. The results of life cycle studies of P. helianthellae and other rust fungi will be published (with Dr. Joe F. Hennen, Purdue University, as coauthor) in Mycologia.

This is the final report on this project.
