Clean water an elusive dream in developing nations: Lessons from International service learning projects in Kenya

Present at the 2017 Social Justice Conference, University of Wyoming.

By Lydiah Nganga
University of Wyoming, College of Education
Lnganga@uwyo.edu
Genesis of International service learning projects in Kenya

• Starting 2003- a colleague and I started taking UW-students to Kenya for Summer study abroad projects/study abroad
• Over the years- more that 150 community members/UW students have taken part in the program.
• Each year’s project let to a new project
• 2013- UW- Casper Hillside Water project-
• 2014- Desk projects – 300 desks to serve 500 kids
• 2015- classroom project- Early childhood classroom & staffroom constructed for same school
• 2016/17- Muranga- Kenya- water to support another community- to be completed Summer 2017
Problem: lack of clean reliable water sources in Kenya

• Why-Unreliable rain- droughts
• Causes- climate- strong spells of dry seasons/years
Water in rural poor communities in Kenya

- Where available
  - comes from unclean sources that are shared by both humans and animals.
  - rainy season- abundance of food for families and livestock
  - droughts are common in Kenya and many other parts of Africa “Water is essential to life. Safe, abundant water is vital to our ability to prosper and to fulfill our potential. Without it, we face a continual decline in our well-being, poverty and hunger, and increasing levels of conflict” (Chissano, 2010).
Solutions to water problems

• Financial resources- water drilling
• Climate? Is there a solutions?
Locals bring water to Kenyan village - Planned to serve 2,000, providing water for estimated 18,000 (Dale Boren, 2013, Casper Journal).
Supporting a community
Current project will be a manually dug out water well-excavation or structure created in the ground by digging.
Project will finish in June 2017.

Bring joy and relief to many families
