## Grand Teton National Park Reports

Mercury and other Trace Elements in Glacial Meltwater at Grand Teton National Park, Wyoming
Gregory T. Carling, David G. Tingey, and Diego P. Fernandez ........................................................................ 2

Dr. John C. Reed, Jr.: Pioneering Geologist, Mountaineer, and Author of *Creation of the Teton Landscape*
Carol D. Frost and John C. Reed, Jr................................................................................................................. 10

Central Place Foraging Characteristics of Beavers (*Castor Canadensis*) and Habitat Modeling in Grand Teton National Park
William J. Gribb and Henry H. Harlow ........................................................................................................ 18

How Conifer Diversity and Availability Influence the Abundance and Biology of the Red Crossbill
Thomas P. Hahn and Elizabeth M. Schultz ...................................................................................................... 28

Identifying Avian Community Response to Sagebrush Vegetation Restoration in Grand Teton National Park
Tracey N. Johnson and Anna D. Chalfoun ...................................................................................................... 36

Preliminary Study of the Influence of Conductivity and Calcium Concentrations on the Density and Species Richness of Native and Invasive Gastropods in Grand Teton National Park, Wyoming
Michele Larson and Gary Beauvais................................................................................................................ 46

The Role of Dendrochronology in Understanding the Modern Decline of Whitebark Pine in Grand Teton National Park, Wyoming
Kendra K. McLauchlan and Kyleen E. Kelly .................................................................................................... 50

Jackson Hole Wildlife Park: An Experiment to Bridge Tourism and Conservation
Diane M. Sanders ............................................................................................................................................... 57

Mass-movement Disturbance Regime Landscapes, Hazards, and Water Implications: Grand Teton National Park, Wyoming
John F. Shroder, Jr. and Brandon J. Weihl ...................................................................................................... 74

Identifying Rare Montane Meadow Parnassian Butterfly Populations across Grand Teton National Park, Wyoming
Kimberly E. Szcondonski and Diane M. Debinski ........................................................................................ 88

Describing the Mountainsnails (*Oreohelix* sp.) of Grand Teton National Park, Wyoming
Lusha Tronstad, Gary Beauvais, Jeanne Serb, and Kevin Roe ........................................................................ 94

## Yellowstone National Park Reports

Paths of Recovery: Landscape Variability in Forest Structure and Function 25 Years after the 1988 Yellowstone Fires
Monica G. Turner, WInslow D. Hansen, Timothy G. Whitby, William H. Romme, and Daniel B. Tinker ................... 99

Old Faithful Visitor’s Center Exhibit Observation Study
Pat Stephens Williams, Ray Darville, Sarah Fuller, and Arthur Temple .................................................................. 102
Greater Yellowstone Ecosystem Reports

Developing Non-destructive Methods to Determine Natal Origins of Snake River Cutthroat Trout in the Jackson Lake Watershed
Scott A. Carleton and Jim Hobbs ............................................................................................................................................................. 112

Exploring the Physiological Mechanisms and Ecological Consequences of Energetic Tradeoffs: An Integrative Study of the Influences of Avian Malarial Infection on Thermogenic Performance
Matthew Carling ...................................................................................................................................................................................... 123

Alpine Moist Meadow Response to Nitrogen Deposition in the Greater Yellowstone Ecosystem
Amber C. Churchill and William D. Bowman ....................................................................................................................................... 128

Using Field Data to Validate Satellite Models of Elk Forage in the Upper Yellowstone River Basin
Erica Garroutte and Andrew Hansen ...................................................................................................................................................... 134

Validation of Fecal-based Methods for Monitoring Nutrition and Reproduction of Moose in the Greater Yellowstone Ecosystem
Jacob R. Goheen and Brett R. Jesmer ..................................................................................................................................................... 138

Spatio-temporal Ecological and Evolutionary Dynamics in Natural Butterfly Populations (2013 Field Season)
Zachariah Gompert and Lauren Lucas ................................................................................................................................................... 146

Pictoralism in the American West
Rachel Sailor ........................................................................................................................................................................................... 150

Nutrient Limitation and Uptake Rates in Streams and Rivers of the Greater Yellowstone Ecosystem
Jennifer L. Tank and Alexander J. Reisinger .......................................................................................................................................... 153

Effects of Climate and Biotic Factors on Life History Characteristics and Vital Rates of Yellowstone Cutthroat Trout in Spread Creek, Wyoming
Patrick Uthe and Robert Al-Chokhaichy ................................................................................................................................................. 160

Intern Report

UW-NPS Wilderness Internship
Shannon Glendenning ............................................................................................................................................................................. 176

Classes at the UW-NPS Research Station

Field Research and Conservation

During the period of this report the University of Wyoming-National Park Service (UW-NPS) Research Center supported and administered research in the biological, physical and social sciences and cultural resources performed in national parks, national forests and surrounding areas in the Greater Yellowstone Ecosystem. The UW-NPS Research Center solicited research proposals from university faculty, governmental research scientists and non-governmental research organizations throughout North America via a request for proposals. Research proposals addressed topics of interest to National Park Service scientists, resource managers, and administrators as well as the academic community. Studies conducted through the Center dealt with questions of direct management importance as well as those of a basic scientific nature.

The Research Center continues to consider unsolicited proposals addressing applied and basic scientific questions related to park management. Research proposals are reviewed and evaluated by the Research Center’s proposal review committee. This committee is composed of University faculty and National Park Service representatives and is chaired by the Director of the UW-NPS Research Center. Research contracts are usually awarded by early April.

The UW-NPS Research Center also operates a field research station at the AMK Ranch on Jackson Lake in Grand Teton National Park. The research station provides researchers in the biological, physical and social sciences and cultural resources an enhanced opportunity to work in the diverse aquatic and terrestrial environments and the cultural resources of Grand Teton National Park and the surrounding Greater Yellowstone Ecosystem. Station facilities include housing for up to 60 researchers, wet and dry laboratories, a library, herbarium, boats, and shop accommodations. The research station is available to researchers working in the Greater Yellowstone Ecosystem regardless of funding source, although priority is given to individuals whose projects are funded by the Research Center.

More information about the UW-NPS Research Station can be found at the station’s web site: http://www.uwyo.edu/uwnps/.

**RESEARCH PROJECT REPORTS**

The following project reports have been prepared primarily for administrative use. The information reported is preliminary and may be subject to change as investigations continue. Consequently, information presented may not be used without written permission from the author(s). Reports from past research at the station (1954–present) are available online and full-text searchable form here: http://repository.uwyo.edu/uwnpsrc_reports.
